

lamps & sockets

Atom Lighting provides a full line of products to support your light fixtures, including an extensive array of lamps and sockets that utilize the latest in halogen and xenon technology. Lamps with halogen gas have long been an industry standout because of their energy-efficiency and their clean white light. Now with the advent of cutting-edge xenon lamps you can enjoy the same attractive light qualities as a halogen lamp, but with an even longer bulb life. All of these pieces are available in a wide range of wattages and beam spreads, and are compatible with each of your Atom Lighting fixtures.
