

effect lenses

Atom Lighting offers a variety of sophisticated lenses and dichroics to help you create the lighting effects you desire. Lenses have functional uses like glare reduction, but can also be used to creatively alter light, casting rays through prisms or softening beams through frosted glass. Dichroics, which are treated to block certain wavelengths of light, are similarly versatile lenses that intensify color to complement your design. Easily installed within our light fixtures, dichroics can subtly warm the amber tones in a bronze statue or brighten the green in cacti without the harsh or artificial look that characterized previous generations of color-enhancement lenses.

1001 / 1006
soft glow insert

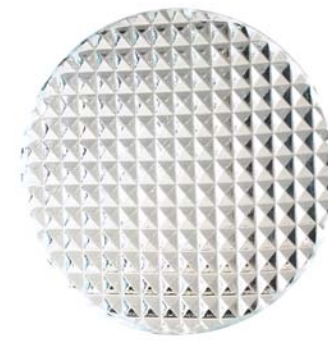

1011 / 1016
glare reduction insert

1021 / 1026
frosted insert
