

## submersible fixtures

Imagine a glittering cascade of water, reflecting light as if it glows from within; a radiant pool of water; or a fountain illuminated against a dark night sky. By combining the reflective qualities of water with the brilliance of light, Atom Lighting's submersible fixtures can achieve these effects and more. Crafted with the same care and quality as our other lighting products, our submersible lighting fixtures will allow your water source to become the centerpiece of your outdoor design.
